Technical Support Project (TSP) Expertise Directory

(Last Update: April 10, 2014)

This directory provides a snapshot of the various types of expertise possessed by the current members of the three Technical Support Project Forums (Ground Water, Federal Facilities and Engineering). It is based on input provided by the members themselves.

EPA established the TSP in 1987 to provide technical assistance to Regional Remedial Project Managers, Corrective Action Staff, and On-Scene Coordinators. The TSP consists of the network of Forums and specialized Technical Support Centers located in ORD laboratories and with OSWER's Environmental Response Team. The Forums work to improve communications and assist in technical transfer between the Regions and the Centers. The Forums also act as technical resources, and disseminate information resulting from the Project to their Regional colleagues. That's where this Directory fits into the scheme.

The experience level of the Regional technical personnel in the three Forums is quite impressive. This Expertise Directory has been compiled (with input from members) to make that experience available to staff. It gives staff a way to connect to the right people; those who possess the technical expertise that is currently needed can be accessed.

This directory is searchable, but not sortable. A list of all areas of expertise that are currently listed in the directory is included on the next page to improve your searches. If there are any errors, please report them to any Forum co-chair, as denoted by an asterisk on the members list.

Current Areas of Expertise

Remedies:

- · Acid Mine Drainage/Mine Influenced Water treatment including Biochemical reactors, HDS, single pass lime systems.
- Air Sparging
- Air Stripping
- AMD/MIW treatment including Biochemical Reactors, HDS, and single phase lime
- BRAC and ICs
- Chemical Oxidation (ISCO)
- Chemical Reduction (In Situ)
- Chemical Treatment/Dechlorination (Ex
- · Electrochemical Treatment
- Electrokinetic Separation
- Engineered Barriers (slurry/sheet pile walls)
- Enhanced Bioremediation (Groundwater)
- Enhanced Bioremediation (Soil)
- Evapotranspiration Landfill Covers
- Excavation
- Fracturing
- Geotextile/Clav Covers
- Horizontal Wells
- Incineration
- · Indoor Air remediation/mitigation
- In-Well Air Stripping
- Mercury Retort
- Monitored Natural Attenuation
- Monitoring
- Multi Phase Extraction
- Open Burn/Open Detonation
- · Permeable Reactive Barrier
- Phytoremediation
- Pump and Treat
- Recirculating Wells
- Soil Vapor Extraction
- Solidification/Stabilization
- Surfactant Enhanced ISCO
- Thermal Desorption (Ex Situ)
- Thermal Oxidizer
- Thermal Treatment (In Situ)
- Ultraviolet Oxidation

Site Characterization **Technologies:**

- Bioassavs
- Borehole Geophysics
- Capture Zone Analysis
- Data Visualization Tools
- Direct-Push Analytical Systems
- Direct-Push Geotechnical Sensors Direct-Push Groundwater Samplers
- Direct-Push Membrane Interface Probes
- Direct-Push Platforms
- Direct-Push Soil and Soil-Gas Samplers
- Electrical conductivity
- Electromagnetics
- Explosives
- Fiber Optic Chemical Sensors
- FID/PID (Flame & Photo Ionization Detectors)
- Fluorescence Kits
- Flute Liners
- Flux measurement Technologies
- Gas Chromatography
- Ground Penetrating Radar
- Ground Water/Surface Water Interaction
- Groundwater Monitoring Network Design or Optimization
- Groundwater Sampling Methods/ Considerations
- GW Plume Attenuation Modeling Tools
- Hydraulic Conductivity Aguifer Testing
- Hydrogeologic Conceptual Site Models
- Immunoassavs
- Inductively coupled Plasma (ICP)
- Infrared Spectroscopy and Imaging
- Isotropic Analysis
- · Laser-induced Fluorescence
- Low-Flow GW Sampling Procedures
- Magnetics for Environmental **Applications**
- Mass Spectrometry
- Multi-incremental Sampling
- Optical Tools (i.e. ROST)
- Passive Diffusion Bag (PDB) Samplers
- Passive Sampling
- Passive Soil Gas Samplers
- PHILLIS
- Pneumatic logging

Site Characterization Technologies (continued):

- Pump Test Design/Review
- Radiological Techniques (Gamma/Alpha Spectometry)
- RCRA Groundwater Monitoring
- Sediment Pore Water Sampling
- Statistical Analysis of GW Data
- Statistical Sampling Design
- Surface Geophysics TAGA
- Tracers
- Well Design/Installation/Development
- X-ray Diffraction (lography/petrographs)
- X-Ray Fluorescence

Contaminant Groups:

- Asbestos
- BTFX
- Chlorinated SVOCs
- Chlorinated VOCs
- Dioxins
- Explosives, Propellants, and Pyrotechnics
- Fuels and Distillates
- Mercury
- Metals
- Nonchlorinated SVOCs
- Nonchlorinated VOCs
- Perchlorates
- Pesticides
- Phenols
- Polychlorinated Biphenyls (PCBs)
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Radioactive Materials
- Radiological

Models:

- 2DFATMIC
- 3DFATMIC
- AMD Treat
- Analytical/Numerical Solutions for **Aquifer Parameters**
- BIOCHLOR
- BIOPLUME II
- BIOSCREEN
- CAMEO

- CHEMELO
- Environmental Footprint Analysis
- FIELDS
- FOOTPRINT
- GEOFAS
- GEOPACK · Green Remediation Tools
- Ground Water Sensitivity Toolkit
- Johnson- Ettinger
- MAROS
- MODFLOW Manual
- MT3D
- MVS/EVS
- NAS
- Only to evaluate for appropriateness-do not run the models
- PESTAN
- PRG, BPRG, SPRG, DCC, BDCC, SDCC
- REMchlor
- RESRAD
- SADA
- Scribe
- SEFA (Spreadsheets for Environmental Footprint Analysis)
- SiteWise
- SourceDK
- SRT (AFCEE)
- UTCHEM
- VLEACH
- VSP WhAFM
- WhAEM2000
- WHPA

Site Types:

- Chemical Manufacturing Facilities
- Drv Cleaners
- Explosives Sites
- Lead and Asbestos SItes
- Manufacturing Gasification Plant, Metal Recycler, Pesticide Formulators
- Mining Sites
- Pesticide Sites
- Rad Sites
- Sediment Sites
- VOC Groundwater Plumes Wood Treatment Facilities
